

# Flexible Toiler Plunger - Blue

The Flexible Toilet Plunger is designed to be used perfectly with any siphon toilet (S shaped trap way tubes at base of toilet).

## How to Use:

1. Simply ensure the toilet bowl is filled with water to help lubricate the plunger and insert the plunger, pushing forwards towards the back of the toilet as per above image.
2. Insert the plunger quickly and push forward and pull back in a rocking motion.
3. Repeat this action a few times, then dredge and flush the toilet to clear the pipes/ trap way.
